(57) Abstract :
ABSTRACT SYSTEM AND METHOD FOR AUTOMATED MEDICATION ADHERENCE VERIFICATION USING IMAGE-BASED DETECTION A computer-implemented system for medication adherence monitoring and verification in dementia patients using image-based detection is disclosed. The system comprises a memory storing executable instructions and a processor coupled to the memory, wherein the processor is configured to execute a plurality of functional modules. The processor executes a medication scheduling module that receives patient medication schedule data comprising medication names, dosage timings, and frequency information from a repository. The processor executes a reminder notification module that generates audio alerts transmitted to an audio transducer and visual notifications displayed on a display device at predetermined medication times. The processor executes an image acquisition module that captures real-time images of a patient using a camera module in response to the generated alerts. [To be published with Figure 1]
